## IUBMB Enzyme Nomenclature

## EC 3.6.3.14

**Accepted name:** H<sup>+</sup>-transporting two-sector ATPase

**Reaction:** ATP + H<sub>2</sub>O + H<sup>+</sup><sub>in</sub> = ADP + phosphate + H<sup>+</sup><sub>out</sub>

**Glossary:** F<sub>o</sub> the "o" refers to oligomycin. F<sub>0</sub> is incorrect.

**Other names:** ATP synthase; F<sub>1</sub>-ATPase; F<sub>0</sub>F<sub>1</sub>-ATPase; H<sup>+</sup>-transporting ATPase; mitochondrial ATPase; coupling factors (F<sub>0</sub>, F<sub>1</sub> and CF<sub>1</sub>); chloroplast ATPase; bacterial Ca<sup>2+</sup>/Mg<sup>2+</sup> ATPase

**Systematic name:** ATP phosphohydrolase (H<sup>+</sup>-transporting)

**Comments:** A multisubunit non-phosphorylated ATPase that is involved in the transport of ions. Large enzymes of mitochondria, chloroplasts and bacteria with a membrane sector (F<sub>0</sub>, V<sub>0</sub>, A<sub>0</sub>) and a cytoplasmic-compartment sector (F<sub>1</sub>, V<sub>1</sub>, A<sub>1</sub>). The F-type enzymes of the inner mitochondrial and thylakoid membranes act as ATP synthases. All of the enzymes included here operate in a rotational mode, where the extramembrane sector (containing 3 α- and 3 β-subunits) is connected via the δ-subunit to the membrane sector by several smaller subunits. Within this complex, the γ- and ε-subunits, as well as the 9-12 c subunits rotate by consecutive 120° angles and perform parts of ATP synthesis. This movement is driven by the H<sup>+</sup> electrochemical potential gradient. The V-type (in vacuoles and clathrin-coated vesicles) and A-type (archebacterial) enzymes have a similar structure but, under physiological conditions, they pump H<sup>+</sup> rather than synthesize ATP.

### ☒ 1: Proton-Translocating ATPases

Multisubunit enzymes that reversibly synthesize ADENOSINE TRIPHOSPHATE. They are coupled to the transport of protons across a membrane.

Year introduced: 2002(1983)

Subheadings: This list includes those paired at least once with this heading in MEDLINE and may not reflect current rules for allowable combinations.

☐ administration and dosage ☐ adverse effects ☐ analysis ☐ antagonists and inhibitors ☐ biosynthesis ☐ blood ☐ chemical synthesis ☐ chemistry ☐ classification ☐ deficiency ☐ drug effects ☐ genetics ☐ history ☐ immunology ☐ isolation and purification ☐ metabolism ☐ pharmacology ☐ physiology ☐ radiation effects ☐ secretion ☐ therapeutic use ☐ toxicity ☐ ultrastructure ☐ urine

☒ Restrict Search to Major Topic headings only

☒ Do Not Explode this term (i.e., do not include MeSH terms found below this term in the MeSH tree).

Registry Number: EC 3.6.3.14

#### Entry Terms:

- H(+)-ATPase
- H+-Translocating ATPase
- ATPase, H+-Translocating
- H+ Translocating ATPase
- Proton-Translocating ATPase
- ATPase, Proton-Translocating
- Proton Translocating ATPase
- H(+)ATPase Complex
- ATPase, F(1)F(0)
- ATPase, FOF1

- F(0)F(1)-ATP Synthase
- ATPase, H(+)

- H+ ATPase
- ATPase, H+
- F0F1 ATPase
- F(1)F(0)-ATPase
- Proton-Translocating ATPase Complex
- ATPase Complex, Proton-Translocating
- Proton Translocating ATPase Complex
- H+ Transporting ATP Synthase
- H(+)-Transporting ATP Synthase
- Adenosine Triphosphatase Complex
- Complex, Adenosine Triphosphatase
- Triphosphatase Complex, Adenosine
- Proton-Translocating ATPase, F1 Sector
- Proton Translocating ATPase, F1 Sector
- F1-ATPase
- ATPase, F1
- F1 ATPase
- Adenosinetriphosphatase F1
- F-1-ATPase
- F 1 ATPase
- H(+)-Transporting ATP Synthase, Acyl-Phosphate-Linked
- Proton-Translocating ATPase, F0 Sector
- Proton Translocating ATPase, F0 Sector
- ATPase, F0
- F0 ATPase
- F-0-ATPase
- F 0 ATPase

Previous Indexing:

- Adenosine Triphosphatase (1966-1982)
